

CLEANING LABORATORY EVALUATION SUMMARY

SCL #: 2003

DateRun: 09/02/2003

Experimenters: Jason Marshall

ClientType: Manufacturing

ProjectNumber: Project #1

Substrates: Alloys, Stainless Steel, Steel

PartType: Coupon

Contaminants: Adhesive, Metal fines

Cleaning Methods:

Analytical Methods:

Purpose: To generate a list of alternative cleaning products that can be used for adhesive cleaning

Experimental Procedure: Using the laboratory's database for solvent cleaning substitution, the lab generated the following lists of products. The products have been evaluated at SSL under similar conditions to the client's criteria.

Results: The lab generated a list of products that have been used to remove various adhesives from either stainless steel or steel. The first table is a list of the adhesive specifics and the second table is the products used to remove the adhesives.

Summary:

Conclusion:

Cleaning varies from case to case. The SSL recommends process specific testing on potential replacement cleaning chemicals. If more information is needed on a particular product, or you are interested in conducting cleaning trials, please contact the lab at (978)934-3133.
