

CLEANING LABORATORY EVALUATION SUMMARY

SCL #: 2003

DateRun: 09/09/2003

Experimenters: Jason Marshall

ClientType: Manufacturing

ProjectNumber: Project #1

Substrates: Aluminum

PartType: Coupon

Contaminants: Coatings, Cutting/Tapping Fluids, Greases, Inks, Lubricating/Lapping Oils, Waxes, Dirt, Oil

Cleaning Methods: Ultrasonics

Analytical Methods:

Purpose: To generate a list of products that could be used to replace alcohol in various cleaning operations.

Experimental Procedure: Using the laboratory's database for solvent cleaning substitution, the lab generated the following lists of products. The products have been evaluated at SSL under similar conditions to the client's criteria.

Results: The lab generated two lists of products that have been used to remove various contaminants using ultrasonic cleaning. The first table is a list of the metal working fluids and the second table is the products used to remove inks, coatings and waxes.
