

# CLEANING LABORATORY EVALUATION SUMMARY

SCL #: 2015  
 DateRun: 04/03/2015  
 Experimenters: Abigail Giarrosso, Digvijay Devkota  
 ClientType: Cleaner Manufacturer  
 ProjectNumber: Project #5  
 Substrates: Glass/Quartz, Chrome  
 PartType: Coupon  
 Contaminants: Films, Soaps  
 Cleaning Methods: Manual Wipe  
 Analytical Methods: Gravimetric, Visual

Purpose: To evaluate supplied products for glass cleaning using manual cleaning

Experimental Procedure: Supplied products were diluted with room temperature water to the requested dilution; 1 gram of salt was resolved into 1.5 liter of water then were electronically activated two times. PH was 8.6 and chorine level was 50 ppm. Preweighed glass, chrome, and mirror coupons were coated with SSL Soil 2 (Glass soap scum: Water 51.5%, Hair gel 25.6%, Toothpaste 10.4%, Shaving cream 5.3%, Hair spray 3.7% and Spray deodorant 3.5%) using a hand held swab and allowed to dry for 24 hours at room temperature. The contaminated coupons were weighed again to determine the amount of soil added.

Three coupons were placed into a Gardner Straight Line Washability unit. A Wypall X60 reinforced wipe was attached to the cleaning sled and soaked with 1 spray of cleaning solutions. Each coupon was sprayed 1 times with the same cleaning solution. The solution was allowed to penetrate for 30 seconds followed by cleaning in the SLW unit for 5 cycles (~10 seconds). At the end of the cleaning, coupons were wiped once with a dry paper towel. Final weights were recorded and efficiencies recorded. Visual observations were made on the coupons for spotting and filming following the general guidelines set forth in the CSPA DCC 09A. Filming is best recognized as "haziness" or overall "miliness", while streaking is best identified as dried droplets or "spotting", usually found strung together into thin white lines. Each coupon was evaluated separately for filming and streaking, (i.e., product residues without added soil), according to a scale of "1" to "5" with;

Filming Streaking

1 = high filming 1 = high streaking (poor performance)

5 = no visible filming 5 = no visible streaking (excellent performance)

ChemistriesEvaluated: Stepan Formula; Windex - Glass Cleaner

Results:

Cleaners	Initial wt	Final wt	% Removed
Stepan Mirror	0.0586	0.0024	95.90
Stepan Mirror	0.0613	0.0031	94.94
Stepan Mirror	0.0643	0.0055	91.45

Summary:

<b>Substrates:</b>	Glass/Quartz, Chrome				
<b>Contaminants:</b>	Films, Soaps				
<b>Company Name:</b>	<b>Product Name:</b>	<b>Conc.:</b>	<b>Efficiency:</b>	<b>Effective:</b>	<b>Observations:</b>
Brand Buzz	Stepan Glass Cleaning Formula	100	90.02	<input checked="" type="checkbox"/>	F 2.44; S 1.89
SC Johnson & Son Inc	Windex Glass & More Cleaner (Spray)	100	96.07	<input checked="" type="checkbox"/>	F 1.61; S 1.42

Conclusion:

Both products cleaned efficiently. Windex cleaned the most efficiently and left the substrates looking the cleanest in both filming and streaking. The Stepan Formula also cleaned almost as effectively as the Windex in efficiency and streaking. The Stepan Formula left more filming than Windex but was still effective.
