

# CLEANING LABORATORY EVALUATION SUMMARY

SCL #: 2016

DateRun: 09/07/2016

Experimenters: Sabrina Apel

ClientType: Jewelry Mfr

ProjectNumber: Project #3

Substrates: Aluminum

PartType: Coupon

Contaminants:

Cleaning Methods: Immersion/Soak

Analytical Methods: Gravimetric, Visual

Purpose: To evaluate the effectiveness of various cleaners in removing Masterdraw L240B from aluminum coupons.

Experimental Procedure: Four cleaners were tested at room temperature on aluminum coupons to evaluate how Masterdraw L240B soil was cleaned. Prewieghed coupons were coated with each supplied soil using a hand held swab for each substrate and weighed a second time to determine the amount of soil added. Each cleaner was put in a beaker and each coupon were placed separately and immersed into the solution for 5 minutes. The coupons were then stood upright to air dry for 15 minutes and then placed on a tray. There was no rinse. Once dry, final weights were recorded and efficiency was calculated for each coupon cleaned.
