

Company Mission

The mission of EnSolve Biosystems, Inc. is to develop environmentally friendly products that eliminate pollutants from air, water, and soil using biotechnology.

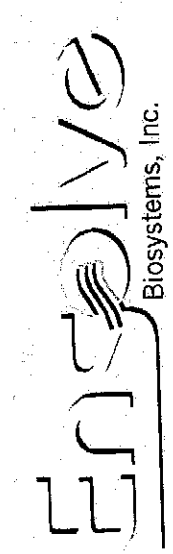

GreaseFeast®

Multi-Purpose Cleaner

- Potent Cleaner
- Environmentally Safe
- Naturally Occurring Microbes
- Biodegradable

GreaseFeast®

EnSolve Biosystems introduces *GreaseFeast*, a new multi-purpose cleaner for the home and shop. *GreaseFeast's* unique Biologically Enhanced Technology (BET) is a concentrated biocleaner using the combined actions of powerful, environmentally friendly detergents with naturally occurring bacteria to dissolve and biologically consume grease and oils. *GreaseFeast*, unlike dangerous caustic chemicals or ineffective soaps, provides a one-two cleaning punch that is safe and effective.

Natural Bacteria Eat Grease and Oils

GreaseFeast's specially formulated microbes naturally and safely eat away your oil and grease problems. These bacteria, isolated from soil and groundwater, are enriched to produce microorganisms hungry for greases and oils.

This natural "**Bioremediation**" process turns grease and oil into the harmless end products of carbon dioxide (CO₂) and water (H₂O). As an added benefit, *GreaseFeast* continues working in storm drains and sewer systems destroying oils and pollutants from various sources.

Unlike caustic chemicals or dangerous solvents, *GreaseFeast* will not damage metal or plastic parts and is completely safe in drain and sewer systems. In addition, *GreaseFeast* is less expensive than solvents.

Natural Bacterial Soap

In the environment, bacteria naturally produce surfactants (soaps) to assist in the break up of hydrocarbons (oils). EnSolve® Biosystems has harnessed the energy from these bacteria in formulating *GreaseFeast*, a scientific product that safely cleans and biodegrades oils and greases from a number of surfaces. Since *GreaseFeast's* bacteria were isolated from the environment, they are safe when used as directed.

Why Use *GreaseFeast*?

Thousands of gallons of petroleum wastes flow into lakes and streams every year polluting the environment and destroying our natural resources. *GreaseFeast* was designed to help combat oil pollution by using nature to clean and eliminate oil and grease. Following surface cleaning, the *GreaseFeast* bacteria continually consume these hydrocarbons as the mixture moves into waterways. After the hydrocarbons are degraded, bacteria populations drop dramatically as their "food" source is

eliminated. *GreaseFeast* merely accelerates the natural process of oil degradation.

Uses

GreaseFeast can be used to clean a number of surfaces including engines, parts, wheels, outdoor furniture, concrete, windows, boats, auto exteriors, and sidings. Follow application rates and precautions suggested on the label. Unused product may be poured down the drain and flushed with water.

Directions for Use

Step 1: Add EnCapsule to *GreaseFeast* container*.

Step 2: Shake well and let stand for 1 to 2 hours prior to use.

Step 3: Apply activated *GreaseFeast* to surfaces at concentrations shown below:

<u>Grease Level</u>	<u>Dilution (GF:H₂O)</u>
High	Full Strength
Medium	1 pint to 1 gallon
Low	1/2 pint to 1 gallon
Window Grime	2 oz. to 1 gallon

*For most indoor applications, addition of EnCapsule not required.
