

Micro-Pore Cleaning With Scout Everywhere™

Typical Cleaning

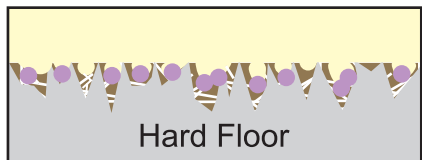

Even though the floor looks clean and seems dry, chemical and dirt residue bind together and build up in the pores of the surface.

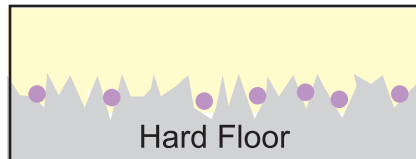

Residues eventually fill micro-pores reducing the surface traction, making the floor more slippery and harder to clean.

(Mop cleaning accelerates this process.)

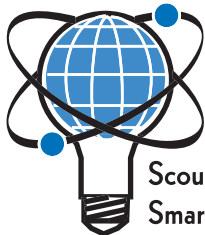

Micro-Pore Cleaning with Scout Everywhere™

Scout Everywhere uses activated enzymes to work deep into micro-pores, actually breaking up residues and lifting them to the surface for easy removal.

Floors look great, maintain the safety of their original surface traction and are easier to keep clean.
