

CLEANING LABORATORY EVALUATION SUMMARY

SCL #: 2015

DateRun: 04/27/2015

Experimenters: Loc Nguyen, George Liang

ClientType: Cleaner Manufacturer

ProjectNumber: Project #1

Substrates: Ceramics, Plastic, Steel

PartType: Coupon

Contaminants: Greases, Food

Cleaning Methods: Manual Wipe

Analytical Methods: Gravimetric

Purpose: To evaluate the supplied product for all purpose cleaning

Experimental Procedure: Soil Preparation:
A mixture of three cooking oils/greases was made. A melt blend of 33% vegetable shortening, 33% lard, 33% vegetable oil and 1% carbon lampblack was made up fresh for the testing. Care was taken in the application of the soil onto the coupons so that light and heavy areas were avoided. Allow the soiled tiles to dry for 24 hours at room temperature.

The contaminated coupons were weighed again to determine the amount of soil added. Three coupons were placed into a Gardner Straight Line Washability unit. A Kimberly-Clark Wypal reinforced paper towel was attached to the cleaning sled and soaked with 1 spray of cleaning solution. Each coupon was sprayed 1 time with the same cleaning solution. The cleaning unit was run for 20 cycles (~33 seconds). Final weights were recorded, efficiencies were calculated and recorded.

Chemistries Evaluated: E-50, Formula 409, Water

Results:

Cleaner_Substrate	Initial wt	Final wt	% Removed	% Avg. Removed
E50_Ceramic	0.4829	0.1313	72.81	
	0.5603	0.1623	71.03	
	0.4783	0.0836	82.52	75.45

CLEANING LABORATORY EVALUATION SUMMARY

	0.4613	0.1291	72.01	68.33
--	--------	--------	-------	-------

Summary Table:

Cleaner:	% Avg. Removed
E-50	81.4
Formula 409	86.2
Water	79.5

Summary:

Substrates:	Ceramics, Plastic, Steel				
Contaminants:	Greases, Food				
Company Name:	Product Name:	Conc.:	Efficiency:	Effective:	Observations:
EcoLogic Solutions, Inc.	Deodorizing Cleaner E-50	100	81.40	<input checked="" type="checkbox"/>	
Clorox Company	Formula 409 All Purpose Cleaner	100	86.20	<input checked="" type="checkbox"/>	
Water	Water	100	79.50	<input type="checkbox"/>	

Conclusion:

The most effective cleaner was Formula 409. It had a rating of 86.2%. In addition to that E-50 had a rating of 81.4% removal rate. Even though E-50 was not considered to be an effective cleaner, it was still partially effective at removing most of the soil from the substrate. For all three cleaners, plastic substrates had the most contaminant removed from its surface. Overall, the best cleaner at removing grease soil contaminant from its surface is in the order of Formula 409, E-50 and Water.
