

CLEANING LABORATORY EVALUATION SUMMARY

SCL #: 2016
 DateRun: 11/16/2016
 Experimenters: Francisco Abreau, Nicholas Landberg, Vinh Tran
 ClientType: Cleaner Manufacturer
 ProjectNumber: Project #1
 Substrates: Liquid
 PartType: Coupon
 Contaminants: Odor
 Cleaning Methods: Immersion/Soak
 Analytical Methods: Smell

Purpose: To measure the effect of various deodorizers on the scent of urine-infected cat litter over time.

Experimental Procedure: Bottles were filled with 2-3 inches of cat litter that had been pre-soiled with cat urine, allowing for three bottles per cleaner and one control. The bottles were capped and left for five days. On the fifth day, the initial smell ratings were taken by three testers (from 1-5, 1 being best), and the recommended amounts of each product were added to their designated bottles. Successive smell ratings were then scheduled to be taken at the initial, one hour, four hour and after twenty-four hour ratings.

Results: All products performed well, all rating an overall improvement in average smell ratings from start to finish. The Summer Breeze had the best overall performance at the 1, 4 and 24 hour intervals as compared with the Fresh Step and Hartz products. Its rating was below two for every timer interval. The other two products were just over two on average.

Summary:

Substrates:	Liquid				
Contaminants:	Odor				
Company Name:	Product Name:	Conc.:	Efficiency:	Effective:	Observations:
Clorox Company	Fresh Step Summer Breeze	100		<input checked="" type="checkbox"/>	
Clorox Company	Fresh Step Crystal	100		<input checked="" type="checkbox"/>	
Hartz	Hartz Litter Beads	100		<input checked="" type="checkbox"/>	

Conclusion: The three products all were effective in reducing the odor smell of pet urine. The Summer Breeze performed better than the other two during the evaluation at all three time intervals.
