

CLEANING LABORATORY EVALUATION SUMMARY

SCL #: 2019
 DateRun: 12/23/2019
 Experimenters: Othon Pagounes, Tuan Le
 ClientType: Cleaner Manufacturer
 ProjectNumber: Project #1
 Substrates: Steel, Vinyl Composite Tiles
 PartType: Coupon
 Contaminants: Dirt, Food
 Cleaning Methods: Manual Wipe
 Analytical Methods: Gravimetric, Visual

Purpose: To evaluate the effectiveness of Shark Ninja formulations in the removal of soils on various surfaces.

Experimental Procedure: Six pre-weighed coupons, three of each substrate per cleaner, were soiled with half a gram of DCC-17 soil (33% lard; 33% shortening; 33% vegetable oil and 1% carbon black powder) distributed onto each coupon using a swab. Dirty weights were recorded after the coupons had dried for 24 hours at room temperature (68° F). Three coupons of the same substrate were aligned into a Single Line Washing Unit (SLW) with Wypall X60 attached to the cleaning sled. The Wypall X60 reinforced wipe along with the coupons were all sprayed three times with the cleaner and then allowed to soak for 30 seconds. Afterwards the SLW was activated, and the coupons were cleaned for 20 cycles. Cleaned coupons dried overnight at room temperature before the final weights were recorded.

Results:

Cleaner	Substrate	Initial wt. of cont. (g)	Final wt. of cont. (g)	% Cont. Removed	Average % Removed	Overall Average % Removed
B Formulation	Painted Steel	0.5224	0.0414	92.08	92.59	87.59

CCC Formulation	86.17	Yes

Summary:

Substrates:	Steel, Vinyl Composite Tiles				
Contaminants:	Dirt, Food				
Company Name:	Product Name:	Conc.:	Efficiency:	Effective:	Observations:
Shark Ninja	Shark Ninja B	100	88.00	<input checked="" type="checkbox"/>	

Conclusion:

All Shark Ninja formulations were effective in the removal DCC-17 from painted steel and vinyl composite tile.
