

# CLEANING LABORATORY EVALUATION SUMMARY

SCL #: 2020

DateRun: 03/04/2020

Experimenters: Sabrina Apel, Tuan Le

ClientType:

ProjectNumber: Project #2

Substrates: Stainless Steel

PartType: Coupon

Contaminants: Blood

Cleaning Methods: Immersion/Soak

Analytical Methods: Gravimetric

Purpose: To evaluate effectiveness of the provided cleaners in regards to removing synthetic blood from stainless steel.

Experimental Procedure: Three pre-weighed stainless-steel coupons per cleaner were coated with synthetic blood using a swab and allowed to air dry (68 F) for 24 hours. Dirty weights were recorded before immersing coupons into the six cleaners provided by the company at the recommended temperature for three minutes. Coupons were rinsed three times in a de-ionized water bath for one minute and dried for 24 hours before recording the final weights.
