SCL #: 2020

DateRun: 10/14/2020

Experimenters: Nicole Kebler

ClientType: Bolt, Screw & Nut Manufacturer

ProjectNumber: Project #1

Substrates: Aluminum

PartType: Coupon

Contaminants: Greases

Cleaning Methods: Immersion/Soak

Analytical Methods: Gravimetric

Purpose: To evaluate the effectiveness of cleaners/solvents for the removal of grease on aluminum substrate for 30 minutes unheated immersion.

Experimental Procedure: Four of eight cleaning products were diluted with tap water at room temperature to vendor recommended concentration. Three cleaning products were used at the recommended 100% dilution and the solvent option was also used at 100% for industrial testing; all cleaners and solutions were measured for 200 mL. Pre-weighed aluminum coupons were coated over 1/3 of the surface with grease that has been provided by the company by using a metal spatula; three coupons were used for each cleaner/solvent. They were allowed a 24-hour dry time at room temperature; their dirty weights were recorded. The coupons were immersed in the cleaners/solvents at room temperature for 30 minutes then were taken out and placed on trays with paper towels; they were left to dry for 24 hours. Final weights and observations were recorded and evaluated.

Cleaners/Solvents used:

Liquinox (1%)

Dimethyl Glutarate (100%)

Mirachem (20%)

Metalnox (100%)

Micro 90 (1%)

Smart Solve (100%)

SC-Aircraft (5%)

Ozzy Juice 3 (100%)

Results: The coupons were still wet resulting in higher clean weights. No grease was removed from the coupon evaluated by visual observation.

Conclusion:

Additional testing is required. The next steps include adding additional time to the unheated immersion and adding agitation with a stir bar. Dry step included during testing when adding stir bar.
