

# CLEANING LABORATORY EVALUATION SUMMARY

SCL #: 2022  
 DateRun: 08/24/2022  
 Experimenters: Tatyanna Moreland Junior, Alexander Symko  
 ClientType: Chemical Company  
 ProjectNumber: Project #1  
 Substrates: Vinyl Composite Tiles  
 PartType: Coupon  
 Contaminants: Carbon Deposits, Greases, Food  
 Cleaning Methods: Manual Wipe  
 Analytical Methods: Gravimetric, Gloss-Color Meter  
 Purpose: Testing the Efficacy of supplied Cloth and Bristle products

**Experimental Procedure:** Floor cleaning for the supplied product was tested using the CSPA DCC 17 - Greasy Soil Test Method for Evaluating Spray-and-Wipe Cleaners Used On Hard, Non-Glossy Surfaces standard. A few minor deviations from the standard were incorporated into the test conducted. The Greasy Soil Test Method is a standard method that evaluates the cleaning performance of products intended for use on washable walls or other hard, non-glossy surfaces. This method provides instructions for soil application, cleaning and evaluation of spray-and-wipe cleaners under controlled cleaning conditions. This method can be used to assess product performance for cleaning a fabricated greasy soil blend applied to painted wallboard tiles. It is not inclusive of all soil or substrates typically encountered by a consumer while using these products.

Latex painted vinyl composite tiles were substituted for masonite wallboard tiles. These tiles were soiled with a mixture of melted, oily soils containing a small amount of carbon black. The tiles were dried overnight at room temperature. A measured amount of spray-and-wipe cleaner is applied to a reinforced paper towel was used in place of the sponge. The soaked towels were used to scrub a portion of the soiled substrate using a straight-line washability apparatus. Separate soiled coupons were cleaned with the other products being evaluated instead of using the same soiled coupon as another product. This was done to eliminate any possible cross contamination of the cleaning process. Three coupons were cleaned by each cleaning product being evaluated. Cleaning performance was taken as a linear function of reflectance value, as well as the amount of soil removed averaged over the 3 coupons for each cleaning product. Masses of the coupons were taken prior to soiling, after soiling and drying, and after cleaning. This was also done for reflectance values taken using a color spectrometer, taken before soiling, after soiling and drying, and after cleaning.

Table 2

The % detergency was calculated with the formula: % det. = (L-clean - L-Dirty)/(L-initial - L-Dirty) \* 10

Cleaner	Coupon #	Initial L	Dirty L	Clean L	%det	Overall Average
A	16	88.41	85.66	86.18	18.91	45.36

Summary:

<b>Substrates:</b>	Vinyl Composite Tiles					
<b>Contaminants:</b>	Carbon Deposits, Greases, Food					
<b>Company Name:</b>	<b>Product Name:</b>	<b>Conc.:</b>	<b>Efficiency:</b>	<b>Effective:</b>	<b>Observations:</b>	
Cloth and Bristle	Cloth+Bristle Household Cleaner	100	84.95	<input checked="" type="checkbox"/>		
Cloth and Bristle	Cloth+Bristle All The Things	100	90.92	<input checked="" type="checkbox"/>		
Dial Professional	Soft Scrub Lemon	100	65.90	<input type="checkbox"/>		

Conclusion:

Cloth and Bristle All the Things outperformed both the Dial Soft-Scrub Lemmon and Cloth and Bristle Household Cleaner in terms of percent soil removed at 90.92 compared to 65.90 and 84.95 respectively. Cloth and Bristle All the Things also outperformed the other 2 products in % detergency as well, with a average of 53.15 compared to an average of 45.36 for Cloth and Bristle household cleaner and 48.75 for Dial Soft-scrub Lemmon.
