

CLEANING LABORATORY EVALUATION SUMMARY

SCL #: 2023

DateRun: 08/21/2023

Experimenters: Tatyanna Moreland Junior

ClientType: Lab

ProjectNumber: Project #8

Substrates: Stainless Steel

PartType: Coupon

Contaminants: Oil

Cleaning Methods: Immersion/Soak

Analytical Methods: Gravimetric

Purpose: To evaluate the effectiveness of SB-22 (79% Ektapro EEP, 14% t-butyl acetate, 7% propylene carbonate), SB-24 (92% Ektapro EEP, 8% t-butyl acetate) and SB-41 (79% EEP, 7% t-butyl acetate and 14% ethyl lactate) in removing oils from stainless steel coupons as a potential replacement for TCE unheated immersion cleaning method.

Experimental Procedure: Three stainless coupons were used for each soil for both cleaners for a total of eighteen coupons. The initial weights of each coupon were recorded. The bottom third of every coupon was soiled by applying the soils with a swab. The dirty weights of each coupon were then recorded. The coupons were then subjected unheated immersion in SB-22, SB-24, and SB-41 with the stir bar at 240rpm for 15 mins. After the coupons were cleaned they were left to air dry over night. The next morning, the clean weights of each coupon were taken.
