SCL #: 2024  
 DateRun: 02/22/2024  
 Experimenters: Amelia Wagner  
 ClientType: Lab  
 ProjectNumber: Project #13  
 Substrates: Stainless Steel  
 PartType: Coupon  
 Contaminants: Food  
 Cleaning Methods: Ultrasonics  
 Analytical Methods: Gravimetric, Visual  
 Purpose: Benchmark Testing of BevSafe products: Unheated Ultrasonics

Experimental Procedure: Three pre weighed coupons were used per soil for two cleaners for a total of 12 coupons. Half of the coupons were soiled with tea and tea leaves with a swab. The other half were soiled with coffee and coffee grounds with a swab. The coupons were then baked in the oven for 40 minutes at a temperature of 200 F to adhere the soils to the coupons and to initiate staining. The dirty weights of the coupons and visual rankings were then recorded. The coupons were then subjected to 10 minutes of unheated ultrasonics in their respective cleaners. The cleaners were used at the vendor recommended concentrations (BevSafe descaler 1%, BevSafe tank and line cleaner 4.5%). The coupons were then removed from the cleaner and the clean visual rankings were recorded. The coupons were allowed to dry overnight before clean weights were recorded. Visual rankings were based on the key below.

Visual Rankings  
 1= 100% soil removed  
 2= 75% soil removed  
 3= 50% soil removed  
 4= 25% soil removed  
 5= 0% soil removed

The BevSafe Cleaner needs to be retested. Although the gravimetric data shows that it did not clean the coffee off the coupons effectively, visually those same coupons looked perfectly clean with no film left on the coupons.

Summary:

Conclusion:

The BevSafe Descaler is highly effective in removing both soils utilizing unheated ultrasonics. The BevSafe Cleaner is highly effective in removing the tea leaves and staining from the coupons utilizing unheated ultrasonics. The BevSafe Cleaner will be retested on the coffee utilizing unheated ultrasonics due to unusual data.
