

CLEANING LABORATORY EVALUATION SUMMARY

SCL #: 2025
DateRun: 02/28/2025
Experimenters: Tatyanna Moreland Junior
ClientType: Lab
ProjectNumber: Project #8
Substrates: Stainless Steel
PartType: Coupon
Contaminants: Oil
Cleaning Methods: Ultrasonics
Analytical Methods: Gravimetric

Purpose: To evaluate the effectiveness of SB-11 (46% Ektapro EEP, 54% Benzyl Benzoate), SB-21 (13% Benzyl Benzoate, 87% Benzyl Alcohol), SB-26 (99% Ektapro EEP, 1% Ethyl Lactate), SB-29 (54% Benzyl Alcohol, 30% Ethyl Lactate, 16% Propylene Carbonate), and SB-32 (81% Ethyl Lactate, 19% Propylene Carbonate) in removing Caster Oil Laboratory Grade from stainless steel coupons as a replacement for TCE.

Experimental Procedure: Three stainless steel coupons were used for each cleaner, for a total of fifteen coupons. The initial weights of each coupon were recorded. The bottom fourth of every coupon was soiled by applying Caster Oil with a swab. The dirty weights of each coupon were then recorded. The coupons were then subjected to unheated ultrasonic in SB-11, SB-21, SB-26, SB-29, and SB-32 for 15 minutes. After the coupons were cleaned, they were left to air dry over the weekend. The next morning, the clean weights of each coupon were taken.

Results:

	0.0224	0.0009	95.98	

Notes: The first 2 coupons did not dry, and the next 4 were partially dry. Could be related to the benzyl benzoate.

Summary:

Conclusion: SB-26, -29, and -32 were effective at removing the oil.
