

CLEANING LABORATORY EVALUATION SUMMARY

SCL #: 2004
 DateRun: 05/05/2004
 Experimenters: Jason Marshall
 ClientType: Jewelry Mfr
 ProjectNumber: Project #2
 Substrates: Sterling/Silver
 PartType: Coupon
 Contaminants: Oil
 Cleaning Methods: Immersion/Soak
 Analytical Methods: Gravimetric
 Purpose: To evaluate successful products on third supplied contaminant

Experimental Procedure: Nine products were selected based on success in previous two trials. Each product was used at full strength in a 250 ml beaker and heated to 96 F on a hot plate. Twenty-seven preweighed silver plated copper coupons were coated with the Lanson Oil Co Vanish 6912 (6742-48-9) using a hand held swab. Coupons were weighed a second time to determine the amount of soil added to each coupon. Three coupons were cleaned in each solution for 5 minutes using stir-bar agitation. After cleaning parts were weighed a final time and efficiencies were calculated.

Results: Eight of the products removed over 80% of the soil within five minutes. Five of the nine products removed over 90%. The table lists the amount of soil added, the amount remaining and the efficiency for each coupon cleaned.

Cleaner	Initial wt	Final wt	% Removed
HFE 7100	0.0377	0.0013	96.55
