

# CLEANING LABORATORY EVALUATION SUMMARY

SCL #: 2007  
 DateRun: 01/16/2007  
 Experimenters: Jason Marshall  
 ClientType: Lab  
 ProjectNumber: Project #1  
 Substrates: Aluminum  
 PartType: Coupon  
 Contaminants: Greases, Dirt, Oil  
 Cleaning Methods: Low Pressure Spray  
 Analytical Methods: Gravimetric

Purpose: Laboratory evaluations of alternative aerosol cleaning products

Experimental Procedure: Basic cleaning performance testing was conducted using ASTM G122 as the bases for cleaning. Six products were selected for testing based on previous testing on the selected soil. All six products were used at full strength at room temperature. Each product, approximately 500 mls, was then poured into an EnviroCaddie aerosol spray system and pressurized to just under 95 psi using Nitrogen. Eighteen preweighed aluminum coupons were coated with a collection of brake/engine soil collected from an automobile shop. The coupons were allowed to sit for one day before a second weight was recorded. Three coupons were cleaned with each solution for 30 seconds via the aerosol spray system. Coupons were not rinsed and were air dried at room temperature for 5 minutes. Following drying, final weights were recorded and cleaning efficiencies were calculated.

Results: Five products removed over 85% of the brake soil in under 30 seconds of spray cleaning. Most of the products took longer to dry than previous tested products and/or left a small amount of liquid at the bottom of the coupons. Wiping the off the coupons resulted in cleaning efficiencies above 90%. The table below lists the amount of soil applied, the amount remaining and the efficiency for each coupon cleaned.

Cleaner	Initial wt	Final wt	% Removed
Harvest Gold	0.1920	0.0683	64.43

**Conclusion:** Some of the alternatives may need to be wiped dry. Despite the residue, all cleaners removed over 85% of the brake soil.
