SCL #: 2008  
 DateRun: 06/25/2008  
 Experimenters: Jason Marshall, Heidi Wilcox, Shweta Bansal  
 ClientType: Chemical Company  
 ProjectNumber: Project #1  
 Substrates: Aluminum  
 PartType: Coupon  
 Contaminants: Resins/Rosins  
 Cleaning Methods: Immersion/Soak  
 Analytical Methods: Gravimetric

Purpose: To evaluate top seven products without rinsing or air blow off drying.

Experimental Procedure: The seven products from the previous trials were selected based on successful removal of the resin were used at full strength in 300 ml glass beakers. Solutions were used at room temperature. Twenty-seven preweighed aluminum coupons were coated with the Mereco ECN 809 Base Black resin using a swab. Coupons were weighed a second time to determine the amount of soil added. Three coupons were immersed into each product and cleaned for 60 minutes using no agitation. The coupons were not rinsed and were allowed to air dry for one hour at room temperature. Final weights were recorded, and efficiencies were calculated.

Results: All seven products removed more than 95% of the resin after soaking for one hour. There were traces of cleaning residue from each product but at varying levels. The Maxi Solv had the least residue left on the coupons followed by Bio T Max and Green Solutions floor stripper. The table lists the amount of resin added, the amount remaining, the efficiency for each coupon cleaned and the ranking of residue remaining.
