SCL #: 2008  
 DateRun: 07/10/2008  
 Experimenters: Jason Marshall, Heidi Wilcox, Shweta Bansal  
 ClientType: Chemical Company  
 ProjectNumber: Project #1  
 Substrates: Aluminum  
 PartType: Coupon  
 Contaminants: Resins/Rosins  
 Cleaning Methods: Immersion/Soak  
 Analytical Methods: Gravimetric, Visual

Purpose: To evaluate different cleaning parameters for resin cleaning

Experimental Procedure: The top six products from the previous trials were selected based on successful removal of the resin were used at full strength in 300 ml glass beakers. Solutions were used at room temperature. Twenty-four preweighed aluminum coupons were coated with the Mereco ECN 809 Base Black resin using a swab. Coupons were weighed a second time to determine the amount of soil added. Three coupons were immersed into each product and cleaned for 60 minutes using no agitation. The coupons were rinsed with tap water for 15 seconds at 68 F and were allowed to air dry for one hour at room temperature. Final weights were recorded, and efficiencies were calculated. Coupons also were visually analyzed to determine the level of residue left on the coupons.

Results: All of the products removed more than 98% of the resin from the aluminum coupons. The Green Solutions floor stripper removed over 100% which could signify that the product was damaging the aluminum coupons. No visual damage was noted however. The table lists the amount of soil added, the amount remaining after cleaning and the calculated efficiency for each coupon cleaned.
