

# CLEANING LABORATORY EVALUATION SUMMARY

SCL #: 2008

DateRun: 08/04/2008

Experimenters: Jason Marshall, Heidi Wilcox, Shweta Bansal

ClientType: Machine Construction Company

ProjectNumber: Project #2

Substrates: Steel

PartType: Coupon

Contaminants: Coatings

Cleaning Methods: Immersion/Soak

Analytical Methods: Gravimetric

Purpose: To evaluate aqueous based alternatives for removing rust preventative coating using immersion cleaning.

Experimental Procedure: Eight products were selected from the lab's database, [www.cleansolutions.org](http://www.cleansolutions.org), based on client supplied information and past testing results. Seven of these products were diluted to 5% using DI water in 600 ml beakers. The eighth was used at full strength. The client's current cleaning solvent was included for comparative purposes.

Twenty-seven preweighed steel coupons were coated with rust preventative VCI 325 using a hand held swab. Dirty weights were recorded. Three coupons were cleaned in each product for five minutes using minimal agitation. No rinse was used and coupons were air dried at room temperature. Once dry, final weights were recorded and efficiencies calculated.

Results: During the cleaning process non of the alternative products removed over 65% of the rust preventative. Where as the current product removed over 90%. The table lists the amount of soil added, the amount remaining and the efficiency for each coupon cleaned.
