

## **CLEANING LABORATORY EVALUATION SUMMARY**

SCL #:	2004							
DateRun:	05/07/2004							
Experimenters:	Jason Marshall							
ClientType:	Bicycle Manufacture	r						
ProjectNumber:	Project #1							
Substrates:	Titanium							
PartType:	Coupon							
Contaminants:	Oil							
Cleaning Methods:	Immersion/Soak							
2								
Analytical Methods:	Gravimetric							
Purpose:	To evaluate success	ful produ	ucts on t	he third su	pplied contaminant			
Experimental Procedure:	Six cleaners were selected from the previous trial. All were aqueous based and were diluted to 5% using DI water in 600 ml beakers. All six products were heated to 120 F on a hot plate.							
	a hand held swab ar coupons were clean water for 15 second	nd then v ed in ea s at 120	weighed ch soluti F, follow	a second t ion for 5 mi /ed by air b	bated with client supplied oil, Exxon Mobil DTE Light, using time to determine the amount of soil added. Three nutes using stir-bar agitation. Coupons were rinsed in tap low off at room temperature. Once dry, coupons were leaner were calculated.			
Results:					ive minutes. Four of the six removed over 99%. The table ining and the efficiency for each coupon.
