

CLEANING LABORATORY EVALUATION SUMMARY

SCL #: 2004

DateRun: 09/02/2004

Experimenters: Jason Marshall

ClientType: Manufacturing

ProjectNumber: Project #1

Substrates: Plastic

PartType: Coupon

Contaminants: Greases, Mold Releases, Fingerprints

Cleaning Methods:

Analytical Methods:

Purpose: To identify a list of alternatives for removing mold release agents (silicone based) in a manual operation.

Experimental Procedure: Using the laboratory's database for solvent cleaning substitution, the lab generated the following lists of products based on vendor supplied information only. Testing of these products under the specific conditions has not been conducted at this time at SSL.

Results: The products listed below have been recommended by vendors for removing grease and Mold Releases/ Silicones from plastic parts using manual wiping applications. Using the laboratory's safety ranking system, all of these products were found to be potentially safer than MEK. (The lab uses five criteria to assess safety: Global warming potential, ozone depletion potential, volatile organic content, pH and the NFPA/HMIS rating system)
