SCL #: 2004

DateRun: 12/20/2004

Experimenters: Jason Marshall

ClientType: Metal

ProjectNumber: Project #1

Substrates: Aluminum, Steel

PartType: Coupon

Contaminants: Cutting/Tapping Fluids

Cleaning Methods: Immersion/Soak

Analytical Methods:

Purpose: To identify alternative aqueous products that will not leave white film/residue

Experimental Procedure: Using the laboratory's database for solvent cleaning substitution, the lab generated a list of products based on similar testing situations.
Contaminant: Threadkut #99 (64742-54-7, 83488-05-5, 72162-15-3, 68920-70-7)

Results: Searching the database for contaminant CAS# resulted in the following products that have been tested successfully.

CAS# in database: 64742-54-7
