

# CLEANING LABORATORY EVALUATION SUMMARY

SCL #: 2005  
 DateRun: 07/28/2005  
 Experimenters: Jason Marshall  
 ClientType: Cleaner Manufacturer  
 ProjectNumber: Project #1  
 Substrates: Brass  
 PartType: Coupon  
 Contaminants: Rust/Scale, Oxides  
 Cleaning Methods: Manual Wipe  
 Analytical Methods: Visual

Purpose: To evaluate supplied products on removing tarnish from brass.

Experimental Procedure: Soak sponge with solution at full strength and wipe brass fixtures in circular motion. After several minutes a second soaking of the sponge was performed and wiping continued for about 10 minutes. After cleaning the fixtures were rinsed with a wet paper towel and allowed to air dry. Observations were made as to brightness of fixture and when appropriate, water flow through shower faucet.

Results: The DFC 23 out-performed the DFC 30 for removing the tarnish from the brass fixtures. The DFC 30 had some foaming when wiped onto surfaces. The DFC 30 did not increase flow through shower faucet whereas the DFC 23 did. All fixtures showed improvement to shine and appearance.

Summary:

<b>Substrates:</b>	Brass				
<b>Contaminants:</b>	Rust/Scale, Oxides				
<b>Company Name:</b>	<b>Product Name:</b>	<b>Conc.:</b>	<b>Efficiency:</b>	<b>Effective:</b>	<b>Observations:</b>
Cogent Environmental Solutions	DFC 23	100	0.00	<input checked="" type="checkbox"/>	
Cogent Environmental Solutions	DFC 30	100	0.00	<input checked="" type="checkbox"/>	

Conclusion: Both products were effective in removing tarnish from brass fixtures. DFC 23 was more successful than DFC 30 in improving water flow.
