

# CLEANING LABORATORY EVALUATION SUMMARY

SCL #: 2018  
DateRun: 05/09/2018  
Experimenters: Carla De La Cruz, Sabrina Apel  
ClientType: Jewelry Mfr  
ProjectNumber: Project #4  
Substrates: Sterling/Silver  
PartType: Coupon  
Contaminants: Lubricating/Lapping Oils  
Cleaning Methods: Immersion/Soak  
Analytical Methods: Gravimetric

Purpose: To identify the hardest lubricating oils to remove from gold and silver substrates.

Experimental Procedure: Twenty four silver-plated aluminum coupons, three per soil, were used for each cleaner. Initial weights were recorded before soiling the coupons on one side with a thin layer using a swab. Dirty weights were taken immediately after soiling, and the coupons were immersed three at a time for five minutes in an unheated (68 F) beaker filled with the respective cleaner. The coupons were air dried before taking final weights and observations.

Results:

Soil	Cleaner	Initial wt.	Final wt.	% Removed	%Avg Removed
